

Angle Port has taken their Kinetic technology to another level with the Kinetic Magazine Weight for the semi-autos. Using CNC machined solid aluminum bar stock, the Kinetic Magazine Weight is factory weighted and when properly installed it is closer to the center of balance while still reducing muzzle flip and recoil.

While the Kinetic Magazine Weight is totally concealed in the magazine, it still provides its full shooting benefits and also serves as a magazine plug.

### **Installing the Kinetic Magazine Weight:**

Remove the end cap, fore-end stock and disassemble the guns magazine tube cap/shaft and remove the factory plug from the magazine spring. Insert the small end of the Kinetic Magazine Weight into the magazine spring and press weight into the guns magazine tube, reinstall the magazine tube cap/shaft and gas piston. Make sure the assembly is properly working before finishing the reassembly. Finish reassembling by installing the fore-end stock and end cap.

**Practice Good Gun Safety!**  
Always make absolutely sure  
the firearm is **UNLOADED**  
before proceeding with  
any disassembly.
