

Designed with the same technology as the Angle Port Kinetic Weighted End Cap for semi-autos, the O/U Kinetic Barrel Weight is CNC machined from solid aluminum bar stock, factory weighted, and anodized with a durable finish. The O/U Kinetic Barrel Weight can be easily positioned to the shooters preference for center of balance.

The O/U Kinetic Barrel Weight under barrel design won't obstruct the shooters field of vision and reduces muzzle flip and recoil.

Available in weights of 8 ounce, 10 ounce, and 12 ounce\* that can be easily interchanged.

*\*Only available by special order.*

### **Installing the O/U Kinetic Barrel Weight:**

Remove the (2) allen head set screws from the barrel weight clamps and separate the 2 sides of the clamps. Place the thread side of the clamps on the barrel and position the Barrel Weight, place the top side clamps over barrel and Barrel Weight and insert the allen head set screws and tighten. Do Not over tighten, may need to adjust the weight position for proper balance after a shooting session.

**Practice Good Gun Safety!**  
Always make absolutely sure the firearm is  
UNLOADED before proceeding  
with any disassembly.
